Education

Cebu Technological University **August 2022 - July 2026**
Bachelor of Science in Information Technology *Cebu City, Philippines*

Technical Skills

Languages: Python, C#, Javascript (Typescript), PostgreSQL, HTML, CSS

Frameworks: RESTful, FastAPI, Django, Flask, .NET, React, Next.js, Node.js, Astro, TailwindCSS

Tools: Git, Github, Docker, PostgreSQL, Redis, Codex, Cursor, Claude Code, Ollama, OpenRouter

Cloud & DevOps: Cloudflare, Vercel, GCP, Supabase, Github Actions, Dockerized Deployments, CI/CD Pipelines

Experience

Full-Stack Developer Intern **Feb 2026 – June 2026**
Dinnox IT Solutions *Cebu City, Philippines*

- Led end-to-end technical discovery and architectural planning, translating functional requirements into scalable frontend and backend systems.
- Architected core backend business logic and secure session management, integrating Google OAuth and JWT-based authentication using HTTP-only server-side cookies alongside modern frontend interfaces.
- Vetted third-party services and secured entry into the Viator Partner Program, engineering backend integrations with Viator APIs as the platform's primary tour data engine.
- Modernized team developer tooling by introducing Docker environments, Supabase services, and AI-assisted workflows to reduce iteration cycles.

Client Projects

Meatshop and Poultry Business | *Astro, Cloudflare, Supabase, Redis, Github Actions*

- Delivered a production sales and order-management platform for a local meatshop and poultry business, centralizing previously fragmented customer, product, order, payment, invoice, and reseller records into auditable end-to-end workflows.
- Built role-based admin and business-agent dashboards for order fulfillment, customer management, sales reporting, agent commissions earnings, and operational content—reducing duplicate data entry and making transactions traceable from order creation through payment.
- Established automated CI/CD pipelines to manage sequential testing and deployments from staging to production, as well as maintenance controls.

Capstone and Hackathon Projects

Barangay Management System | *React, Django, Docker, Supabase*

- Developed a web and mobile platform that streamlines barangay operations through a centralized system, automating manual record keeping such as resident/non-resident profiling, incident reporting, blotter, request and issuance of documents, financial budgeting, events, and waste management.
- Key implementations include automated Know Your Customer (KYC) verification and assessment for resident and non-resident (business owners) registration, dynamic public facing page content via admin controls, role-based access with different dashboard views, as well as CI/CD pipelines for developer operations.

Orca | *Python, Astro, React, Redis, Supabase, Docker*

- Developed an AI-powered solution that turns real-time conversations into structured project plans so teams never loses sight of their project's finish line.
- Contributed to the development of this project's Minimum Viable Product within 6 days as Full Stack.

Hyperlocal Circular Economy Platform | *React, FastAPI, Supabase, Docker*

- Developed an application to divert food wastes from landfill, contributing to environmental wellness while fostering commnuity resilience.
- Integrated an AI inference automation for food waste posting via images using gemini cloud LLM models.

Hackathon & Ideathon Competitions

Reply AI Agent Challenge 2026 | *Python, LangChain, OpenRouter, Langfuse, LightGBM, XGBoost* **Rank 64 / 1,920 Teams**

- Built a multi-agent AI risk-classification system using a hybrid ML and LLM pipeline to analyze event, mobility, and persona data, flag high-risk cases, and validate submissions with traceable agent runs.

OLTEK Paper to Data Hackathon | *FastAPI, PaddleOCR, Ollama, Next.js, PostgreSQL, Docker* **Top 10 Finalist**

- Built a document intelligence platform that transformed contracts and scanned logistics paperwork into structured datasets and export-ready Excel reports through OCR, LLM extraction, validation, and a real-time web interface.

USAII Global AI Hackathon 2026 | *FastAPI, Astro, React, Supabase, PostgreSQL, Redis* **Finalist**

- Built a human-in-the-loop AI planning workspace that used multi-stage agents, context retrieval, and proposal validation to turn team chats and project artifacts into structured execution plans.
